

# SPECIALIST TIMBERS

MH Southern offer a range of timbers to customers looking for more specialist items including large sections and longer lengths for particular projects.

## Softwoods

### DOUGLAS FIR

This is a timber of good strength and durability and is available in merchantable and clear grades. Large sections lend themselves to heavy constructional use, while smaller kiln dried, clear sections work well in both internal and external joinery applications.

### HOME GROWN LARCH

Slow grown, tough and durable these British timbers have an attractive knotty appearance and are ideal for applications that require a rustic appearance.

### SIBERIAN LARCH

Larch is a very versatile softwood, because it is slow grown it is a dense and durable product making it ideal for cladding, weatherboard and decking applications.

### PITCH PINE

This is a strong and durable timber used for ship building, decorative beams and heavy constructional work, with smaller kiln dried sections being used for flooring and quality joinery works.

### QUEBEC YELLOW PINE

This species is sometimes referred to as White Pine, and is native of North America. It is a very stable timber and much lighter and softer than comparative redwoods.

### WESTERN RED CEDAR

A very durable timber with character which lend itself well for use in a number of external applications such as exterior cladding, greenhouse and conservatory manufacturing.

### GERMAN WHITEWOOD

German whitewood is straight-grained with a smooth and even texture. The wood has medium density. Suitable for multiple applications.

## Hardwoods

### EKKI

Ekki continues to be popular as a specialist timber. Its appearance, natural density, durability and resistance to decay make it a popular species for a number of specialist heavy duty construction uses.

### OAK

Oak wood is strong, heavy and durable. It is an attractive light colour with a prominent grain and is resistant to fungal attack.

### GREENHEART

One of the strongest timbers commercially available today, in both large sections and long lengths. Greenheart is a very durable timber for use in a variety of constructional situations including both marine and heavy civil engineering projects.

### OPEPE

A yellowish-brown hardwood grown in West Africa. Extremely strong, durable and resistant to decay. Opepe is widely used in heavy construction applications and in marine and jetty work.
