A choice of 6 beautiful timber species and 10 classic profile designs

...ready and waiting for your next project

Western Red Cedar

Siberian Larch

Home Grown Larch

Clear Douglas Fir

Scandinavian Redwood

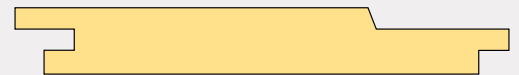

Thermowood® Radiata Pine*

A choice of timber species, all from sustainable resources, will help you create responsible and beautiful cladding designs for your next build project, whether they are used for interior or exterior applications. Each species is available to be machined in any of the 10 profiles and sizes shown below.

And to make sure these timbers have the very best performance we can add a choice of proven, industrially applied preservative or fire retardant protection that will give you and your customers real confidence in their use.

Pattern 9014 14 x 95mm

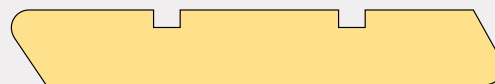

Pattern 6690 19 x 145mm*

Pattern 6680 20 x 145mm

Pattern 6670 21 x 142mm

Pattern 6660 19 x 142mm

Pattern 6625 15 x 120mm

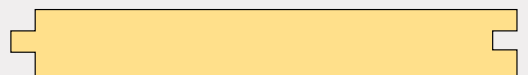

Pattern 6610 20 x 113mm

Pattern 6620 20 x 145mm*

Pattern 6600 15 x 95mm

Pattern 112 20 x 145mm

* Thermowood® Radiata Pine available in 2 profiles from stock - Pattern 6690 and 6620.
Other Thermowood® Radiata Pine sections are available to order.

Bespoke profiles available to order

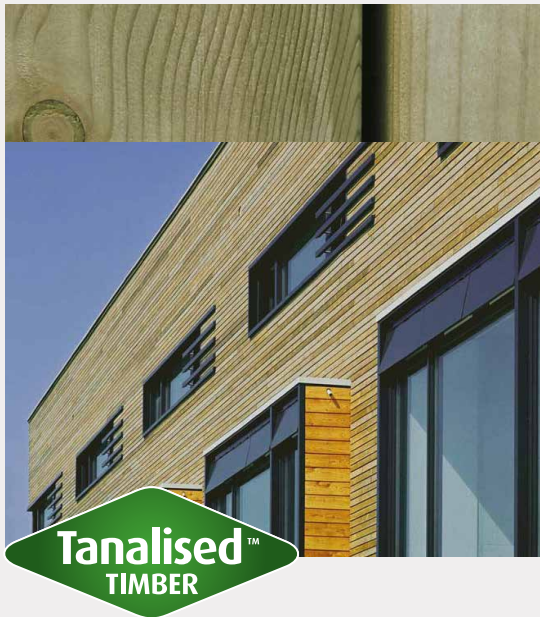

We can also produce bespoke profiles to suit all applications, and can offer expert advice to ensure that the most appropriate timber is specified for each project.

If you require a profile that is not available from our standard range above please contact our Sales team who will be happy to help.

Preservative protection ...when you need it.

MH Southern offers a choice of industrially applied preservative treatments to make sure your cladding timbers will have an extended service life, fully protected against the threat of decay or insect attack for exterior claddings.

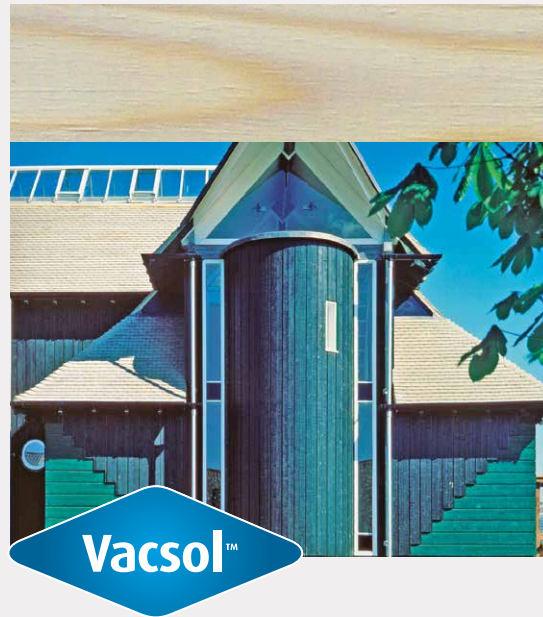

TANALISED timber has the ultimate long term protection against wood decay and insect attack.

TANALISED timber is timber which has been impregnated with TANALITH E wood preservative under controlled conditions in our high pressure vacuum impregnation plant.

The treated timber has an initial natural green colouration. On external exposure, the green colour slowly weathers to a warm, honey brown and in the longer term becomes a natural silver grey. This weathering process does not indicate any loss of preservative protection.

We can also offer TANATONE treatment for your claddings. All the protection benefits of TANALISED timber but with a rich brown colour already added.

VACSOL Aqua timber preservative is industrially applied in our controlled low pressure, double vacuum plant. This process gives an outer envelope of protection to the cladding timbers. Less moisture is absorbed than in high pressure treatments allowing the wood to dry quicker and helping to retain its original dimensions.

The appearance and colour of VACSOL Aqua treated claddings remains virtually unchanged.

VACSOL Aqua treated cladding timbers should only be used above the damp proof course of any building. When used in exterior applications, they must have a suitable surface coating applied to maintain the preservative protection.

Priming finish ...when you need it.

High Quality Primer Service

MHS now offer a priming service on many of our timber claddings.

Save hours of applying a primer by brush and let us spray your cladding with an acrylic white primer so all you have to do is apply your desired top coat finish.

Not only does it save you time, it also helps you achieve a perfect finish as there are no brush marks when the primer is applied by spraying.
